

Assignment: Prompt Engineer

Date: 30/03/2026

Name: Aashish Chaudhary

Objective

To understand how prompt quality affects AI output by comparing weak and strong prompts.

1. Resume Prompt

Weak Prompt:

"Write a resume"

Strong Prompt:

"Create a professional resume for a Computer Science student with skills in Python, Data Science, and Power BI. Include education, projects, and internships in a structured format."

👉 Difference: Strong prompt gives context, skills, and structure → better output

2. Business Idea Prompt

Weak Prompt:

"Give business idea"

Strong Prompt:

"Suggest a low-investment startup idea for college students in India, including target audience, cost, and potential profit."

👉 Difference: Strong prompt is specific and detailed

3. Study Plan Prompt

Weak Prompt:

"Make study plan"

Strong Prompt:

"Create a 7-day study plan for learning Python basics for a beginner, including daily topics, practice tasks, and time allocation."

👉 Difference: Strong prompt defines duration, level, and structure

4. General Content Prompt

Weak Prompt:

"Explain AI"

Strong Prompt:

"Explain Artificial Intelligence in simple words for a beginner with examples and real-life applications in 100 words."

👉 Difference: Strong prompt controls length, audience, and clarity

Key Observations

Strong prompts are specific and detailed

Weak prompts are vague and unclear

Better prompts lead to better AI responses

Context + constraints improve accuracy

Conclusion

Prompt engineering plays a crucial role in getting accurate and useful results from AI. Clear, detailed prompts produce more relevant and structured outputs.
