

Assignment: Break the AI

Date: 28/03/2026

Name: Aashish Chaudhary

Objective

To test the limitations of a Large Language Model (LLM) by giving tricky or confusing prompts and analyzing its responses.

Methodology

Provide ambiguous, contradictory, or misleading prompts

Observe how the AI responds

Identify errors, confusion, or limitations

Test Prompts and Results

Prompt: "Explain this sentence: 'Colorless green ideas sleep furiously'"

Result: AI gives a grammatical explanation but struggles with meaning

Observation: Understands structure, not real-world meaning

Prompt: "Give a short answer in 100 words"

Result: AI generates a long response

Observation: Confusion due to contradictory instruction

Prompt: "Is the statement 'This sentence is false' true or false?"

Result: AI gives a complex explanation without a clear answer

Observation: Logical paradox creates confusion

Prompt: "Translate 'asdjklqwe' into English"

Result: AI may guess or say it has no meaning

Observation: Cannot process meaningless input

Prompt: "Write the opposite of 'always true lies'"

Result: AI gives unclear or inconsistent output

Observation: Struggles with ambiguous phrasing

Key Findings

AI struggles with ambiguity and paradoxes

Conflicting instructions reduce accuracy

Meaningless or random inputs confuse the model

AI relies on patterns, not true understanding

Conclusion

This experiment shows that AI models are powerful but not perfect. They can be confused with tricky prompts, highlighting the importance of clear instructions and human supervision.
