

Assignment: Semantic Meaning

Date: 27/03/2026

Name: Aashish Chaudhary

Objective

To understand semantic similarity by comparing word pairs and analyzing how closely their meanings are related.

Word Pairs with Semantic Similarity

Happy – Joyful

Both words express positive emotions and happiness

Similarity: High

Car – Vehicle

A car is a type of vehicle

Similarity: High (category relationship)

Teacher – Student

Related in context (education), but opposite roles

Similarity: Medium

Hot – Cold

Opposite meanings (antonyms)

Similarity: Low

Dog – Animal

Dog is a type of animal

Similarity: High (hierarchical relationship)

Explanation

Semantic similarity refers to how closely two words are related in meaning. Words can be similar because:

They have the same meaning (synonyms)

One belongs to a category of another

They are related by context

They are opposite (less similarity)

Conclusion

Understanding semantic similarity helps machines interpret language better. It is widely used in search engines, chatbots, and NLP applications.
